

# iTrac Replay

Protecting your most valuable asset...  
your company data.

As a small business you know you how important your company information is and how disruptive down time can be.

iTrac Replay ensures your data is backed up reliably and securely without the hassle of changing tapes or remembering to take media off-site. With no big capital expenditure or annual media bills you can accurately budget your costs as your business grows.

## Reliable and Secure

iTrac Replay is a fully managed service to protect all of your various data and systems.

Our Helpdesk and iTrac Live software constantly monitor the on-site appliance and the performance of the backup routines.

All of your data is fully encrypted before being safely uploaded to our data centre based in the north east of England.

## Flexible and Scalable

iTrac Live is totally modular which allows us to select only the agents and components which your business needs.

As your business data grows, the storage quota can be easily extended or reduced so you only pay for what you use.

## Fast Recovery

Recovering data from the appliance is 20 times faster than recovering data from tape. Whether you need a couple of files or emails, or the entire system restored iTrac Replay makes it a simple task.

With the optional disaster recovery appliance, your system can be spun up onto a virtual machine and ready for use in minutes.

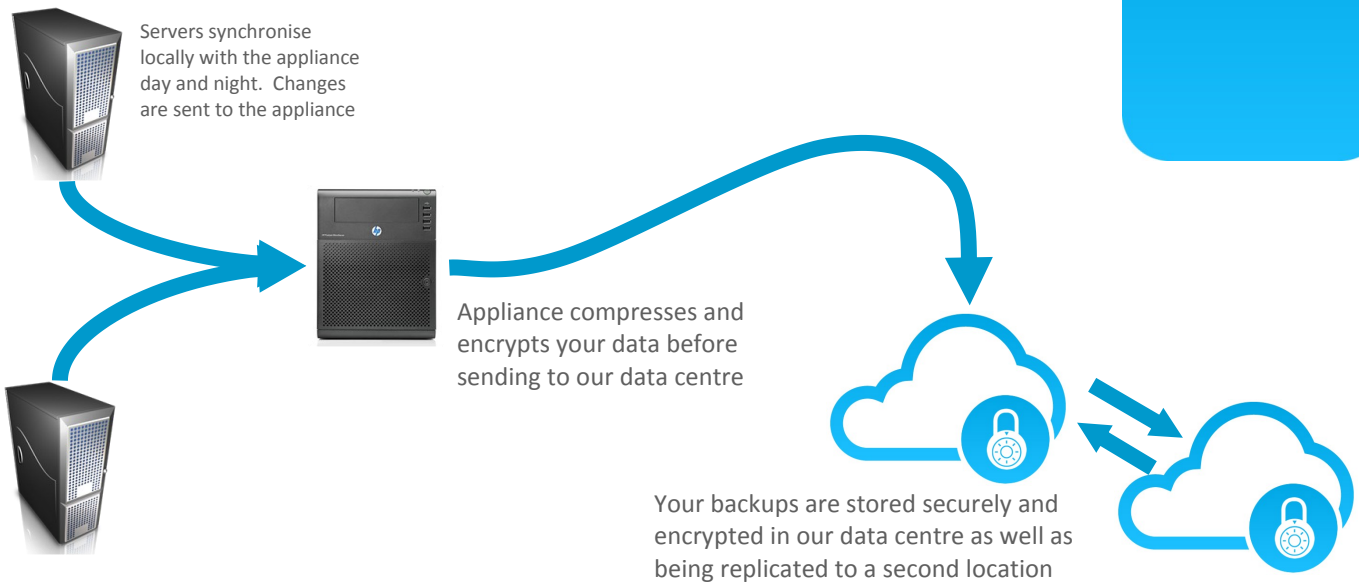

## Future Proof

Never buy another tape drive again! As your system grows and changes, so too does iTrac Replay.

The software engine is constantly being developed and improved to protect more systems, databases and cloud based applications; so as a new technology emerges you can be assured that you're covered.

## iTrac Replay How it works

### Fast, efficient and reliable

iTrac Replay uses a two stage approach to protecting your data. All your information, databases and applications are backed up to the local appliance before they are encrypted and sent off site for disaster recovery security.

### Features

Once the local appliance has been installed in your office, we can configure your backup to cover all of your servers regardless of what they are running.

#### Intelligent Sync

After the initial seed backup, only the data which has changes is sent off site. This minimises the time it takes to secure your data without causing a bottleneck.

#### Granular and Disk Image Recovery

Whether you need to get everything back up and running or you just need to recover a single file —iTrac Replay has the flexibility to get the information back.

#### Fully Managed Service

Our Helpdesk manage your backup service every day ensuring your data is protected. Recovering data is just a phone call away.

#### Instant Disaster Recovery

Available as an option, iTrac Replay can take multiple snapshots of your entire system at set points throughout the day. Should something go horribly wrong the system can be fired up instantly using virtual machines on the appliance.

### Options

iTrac Replay can be customised to suit your exact requirements

#### Flexible Storage

Choose from 100Gb, 250Gb, 500Gb or 1Tb. All stored securely and locally in the North East of England.

#### Backup Agents

Agents available to cover Windows, Linux, MAC, Exchange, VM Ware, SQL, Exchange, and many more.

#### Disaster Recovery

Multiple daily snapshots can be taken to enable instant access to your system as a virtual machine running on your appliance or at a remote office.

Managed IT Services from Concept IT. For a fixed monthly fee you can budget your IT expenditure for the entire year with the reassurance that whatever happens you're in safe hands. We manage all aspects of your infrastructure so you can concentrate on what matters to you—**your business.**
